MakeThat.

Photo sheet for a flat part

Print at 100% (Actual size), not "Fit to page".
Keep the four black squares clear.

This bar should measure 100 mm. If it doesn't, tell us what it measures.

1 Lay the part flat in the middle of the box. Dark or coloured parts show best.
2 Hold your phone straight above it, about 40 cm up, on the normal camera (1x).
3 Get all four black squares in the photo, in soft, even light: no flash, no strong shadows.
4 Send the photo with your enquiry. Flat parts work best; for thick parts, add one or two measurements.
